

Pre-Grown Option

Pre-Grown Modules Offer Instant Aesthetics and Other Benefits

For the Weston Solutions, Inc. (WESTON®) GreenGrid® Modular Green (vegetative) Roof System, pre-planting modules at a local nursery just before delivery is standard, a “just-in-time” practice that is the most cost-effective green roof option in the industry. However, WESTON recommends and offers many pre-grown options to meet your needs and specifications.

A pre-grown GreenGrid green roof systems can meet plant coverage specifications up to 95%. Modules are grown out at our partner nurseries in accordance with your specifications, delivered to the job site, and installed for an instant mature green roof.

In addition to the instant aesthetic appeal, grown-out modules provide other functional benefits: A mature green roof is less susceptible to weed encroachment, and mature vegetation helps protect the growing medium from potential wind scour and water erosion. This translates to a successful green roof with less maintenance.
